

Interação Pessoa-Máquina

2024/25

Final project

48432 André Wemans
59962 Bernardo Atalaia
60220 Francisco Costa
58427 Liliane Correia

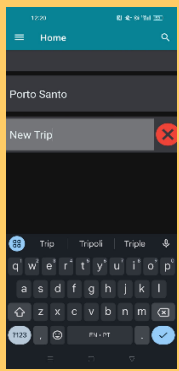

P1
Grupo 8

The group 7 project was received on the 22nd of November at 22h.

Our report was sent to group 7 on the 28th of November at 22h.

Stage 5: Heuristic evaluation

Nº	Problem	Heuristic	Description	Severity	Solution	Screenshot
1	Trapped in the Map when selecting the location	User control and freedom	forced to select a location, cant go back	Minor Lilly- 3	Add an option to go back	
2	Can't search for locals, need to find it in the map	Flexibility and Efficiency of Use	Forced to find the wanted location, can't see the user's current location and cant search for the wanted location.	Major Lilly - 2	Add a search bar for locations and an option to see the user's current location	

3	Can't edit or remove trips	User control and Freedom	It is not clear that it is even possible to edit the trips due to lack of clarity	Minor Lilly - 1	Add a button at the side of each trip to edit it or delete it	
4	Topbar	Visibility of System Status	Topbar is half covering first event on Samsung S23	Low	Change layout to ensure all components are completely visible	
5	Event without localization	Error prevention	It is possible to create an event without giving any location	Low Lilly - 1	Make the event local as mandatory information	
6	Trip Creation	Visibility of System Status	After creating a trip, it opens the map, not sure whether the trip was created or supposed to choose the location of the trip.	1	A popup to let us know the event was created.	
7	My Trip's Events	Recognition rather than recall	I cannot see my events on a trip, just keep adding. To see a trip's event, I needed to search and then click on the event on the map. Not clear.	2	A clear list of events for a certain trip.	
8	Search bar needs to	Visibility of System Status	The first time a user clicks on the search icon	1	Make it default entering	

	clicks to open text for input		the top bar changes for search but the user needs to click a second time on the search icon to start to input text		the search bar already expecting text input
